

# PSHE - How can friends communicate safely?

## Key Vocabulary

## Key Knowledge

<b>Digital Footprint or digital presence</b>	Your digital footprint is all the information about you that appears online. This can mean anything from photos, audio, videos and texts to “likes” and comments you post on friends’ profiles. Just as your footsteps leave prints on the ground while you walk, what you post online leaves a trail too.
<b>Online Privacy</b>	The ability to control what information you share about yourself online and who can see and share it.
<b>Oversharing</b>	Sharing too much online – usually it means sharing personal information or just too much about yourself in a certain situation or conversation online.
<b>Personal Information</b>	Information that identifies you – for example, your name, street address, phone number, national insurance number, email address, etc. – is called personal (or sensitive) information. It’s a good idea to make a rule for yourself not to share this kind of information online.
<b>Reputation</b>	The ideas, opinions, impressions, or beliefs that other people have about you – something that you can’t be totally sure about but that you usually want to be positive or good.
<b>Phishing</b>	An attempt to scam you or trick you into sharing your login or other personal information online. Phishing is done through email, social media, texts, ads or web pages that look similar to ones you’re already used to but are fake.
<b>Trustworthy</b>	Able to be relied on to do what is right or what is needed.
<b>Malicious</b>	Words or actions intended to be cruel or hurtful. This word can also refer to harmful software intended to do damage to a person’s device, account or personal information.
<b>Authentic</b>	Real, genuine, true or accurate; not fake or copied.
<b>Hacker</b>	A person who uses computers to gain unauthorised access to other people’s or organisations’ devices and data.
<b>Password/ passcode</b>	A secret combination used to access something. It can take different forms; for example, you may have a numbers-only code that you use for your phone lock and much more complex passwords for your email and other accounts. In general, it’s important to make your passwords as long and complex as you can while still being able to remember them.

**Be Internet Sharp - Think before you share.**

**Be Internet Alert – Check it’s for real.**

**Be Internet Secure – Protect your stuff.**

**Be Internet Kind – Respect Each Other**

**Be Internet Brave – When in doubt, discuss**
